Akshay Daundkar

Full Stack Software Engineer

(+91) 8788216064 akshay.daundkar.net@gmail.com https://www.linkedin.com/in/akshay-daundkar/

SUMMARY

Full Stack .NET Developer with **4.5+ years of experience** building scalable web and cloud-based applications. Strong expertise in **ASP.NET Core Web API, Angular, Microservices, and Azure services** including Service Bus, Functions, APIM, Cosmos DB, and Blob Storage. Experienced in developing **real-time and IoT-driven systems** using Web Sockets and event-driven architecture. Proficient in **Docker and Kubernetes** for containerization and scalable deployments, with hands-on experience in **Azure DevOps for CI/CD automation**. Strong emphasis on code quality, test reliability, and CI/CD-driven delivery across cloud-native and microservices architectures.

SKILLS

Frontend

Angular, Java script, Type script, HTML, CSS, JQuery, Bootstrap, Ajax

Backend

.NET Core, MVC, Web API, C#, LINQ, Entity Framework Core, ADO.NET, SOLID Principles, Docker, Dapper, Swagger, Postman, AutoMapper, API Gateway (Ocelot), Fault Tolerance (Polly), Rabbit MQ

Database

MS SQL, Cosmos DB, Redis cache

Cloud Platform

Azure App Service, Azure Kubernetes Service (AKS), Azure DevOps, Azure API Management (APIM), Azure Service Bus, Microsoft Entra ID (B2C), Azure Container Registry (ACR), Git, CI/CD Pipelines, Azure Key Vault, Azure Synapse (Notebooks & Pipelines), Web Jobs, Functions

EXPERIENCE

Full Stack Software Engineer

Winjit Technologies Pvt Ltd

05/2024 - Present Pune, India

Led development of IoT platform processing real-time data from **40,000 devices** by integrating IoT APIs and Azure Cloud services.

Full Stack Software Engineer

Tech Mahindra

10/2023 - 05/2024 Pune, India

Optimized RESTful APIs and database queries, achieving up to **40%** reduction in response time and improving application performance.

Software Intern and Full Stack Software Engineer

Vhaash Technologies Pvt Ltd

09/2021 - 10/2023 Pune, India

Developed and maintained an e-learning platform supporting **260+ active users** with video streaming and course management features

EDUCATION

MBA (Information Technology)

Dr. D. Y. Patil Vidyapeeth

02/2023 - 08/2024 Pune, India

GPA
8.41 / 10

PROJECTS

AWTOS IoT

Architected an IoT-based water valve system with real-time event processing, automated reporting using Azure Synapse, and scalable data handling on Cosmos DB.

- Developed the AWTOS IoT platform for real-time device monitoring and control, integrating IoT APIs and Azure services with a scalable .NET backend.
- Designed event-driven data processing using **ASP.NET Core, Entity Framework,** and **AutoMapper** to store structured data in **Azure Cosmos DB.**
- Implemented efficient data storage using optimized **partition keys**, improving query performance and scalability.
- Processed device telemetry and business events into multiple collections, ensuring high availability and data consistency.
- Delivered logic to trigger preventive **automation scenes** after device binding, reducing potential damage and improving system safety.
- Developed business APIs for **reporting and analytics**, enabling data-driven insights.
- Created **Azure Synapse Notebook**s to process large datasets and generate **Excel** and **PDF reports.**
- Reduced manual reporting effort by integrating **Azure Synapse Notebooks and Pipelines** with ASP.NET Core APIs to auto-generate Excel and PDF reports on schedule.
- Analysed daily IoT telemetry using **Python (NumPy, Pandas, Matplotlib)** to identify device usage patterns and inform system optimisation decisions.
- Tracked and analysed daily IoT message throughput, identifying bottlenecks and improving pipeline reliability.
- Configured a consumer facing mobile app on the IoT platform for **valve and sensor** management, currently live on **Play Store** and **App Store.**
- Used **Agile** methodology for project management.

PRIZAMIQ

Engineered a full-stack AI-based inspection platform enabling remote home assessment using PWA, microservices, and real-time communication.

- Architected frontend using **Angular** and backend using **ASP.NET Core Web API with microservices.**
- Implemented feature for scheduling calls between user and Inspection Concierge (IC) for guided inspection.
- Enabled users to capture and upload images, which are stored in **Azure Blob Storage.**
- Created reviewer module to check and **label images** for AI model training.
- Added validation to re-upload incorrect images, improving data quality.
- Generated inspection reports automatically and sent results via email.
- Used **RabbitMQ** and **Azure Service Bu**s for smooth asynchronous communication.
- Integrated Ocelot API Gateway to centralize **JWT authentication, rate limiting,** and **request routing** across 6+ microservices, reducing client-side complexity.
- Used **Redis** caching to improve performance and reduce API response time.
- Deployed application using **Docker** and **Kubernetes** for scalability.
- Strengthened system resilience by integrating **Polly**-based retry and **circuit-breaker** patterns into the microservices architecture.

KEY ACHIEVEMENTS

Auto-Close Side Stand for Motorbike

INSPIRE

Selected at state level for an innovative school project. **Auto-Close Side Stand for Motorbike**, showcasing early engineering and problem-solving skills
